

B5 - Application Development

B-DEV-500

Bootstrap AREA

Choose a technological stack

As explained during the kick-off, the first milestone of the AREA project is dedicated to project management.

But, in order to be able to plan correctly, you must know which technological stack you are going to use to do the project.

Do that carefully and with method, don't just rush on javascript: EXPLORE the state of application development.

Use this bootstrap session to learn more about different technological choices that could work for you. Bootstrap them, test them for thing you will need during the project and write a paper summarizing your research and how you got to choose a specific tech.

Here's some examples of tech that you should explore:

- elixir
- PHP
- Ruby
- Python
- NodeJS
- Java
- .NET
- Kotlin
- C++
- And many more...
